Axway is the ONLY provider in the market today to manage, run, secure, and monitor all your business interactions – emails, files, messages, services, events, and processes. Spanning all industries, over 11,000 organizations in more than 100 countries depend on Axway's proven breadth of services and layers of governance to build and improve value chain efficiency, regulatory compliance and quality of service.

In the automotive sector, Axway develops a wide range of preconfigured B2B solutions to enable the secure end-to-end management of supply chain processes and deliver flexibility and fast time to value:

- Automotive Supply Chain Ready-to-Run Package
  Speed time-to-market with preconfigured standard scenarios, processes, and dashboards for all typical business processes of the automotive industry, such as ordering, delivery and accounting transactions.

- Automotive Supplier Portal (WebEDI)
  Reduce operational costs and optimize processes, by quickly onboarding all suppliers into the supply chain, even if they do not have their own integration product. This high-performance WebEDI system is available as a service worldwide, conforming to recommendations made by the VDA (Verband des Automobilindustrie) and ODETTE (Organisation for Data Exchange by Tele Transmission), covering all relevant standard automotive processes.

- Collaborative Engineering (ENGDAT)
  Implement CAD-based projects efficiently with development partners with fast and secure ENGDAT (Engineering Data) communication. Exchange CAD/CAM models, service descriptions, object lists, or images electronically in accordance with ODETTE or VDA standards.

- E-Invoice
  Increase efficiency and reduce operational costs by transmitting invoices and credit notes 100% electronic via standard communication protocols, including optional encryption. Digital signature, archiving and tracking are included. The Axway solution e-Invoice France/DMF provides all functions that are required by French law for the electronic exchange of structured invoices.

Axway is a certified OFTP2 Solution Provider. Axway OFTP2 solution implements the latest OFTP2 recommendations, including automated certificate exchange. As a core member of the Odette OFTP2 work group, Axway is one of three service providers that is qualified to conduct OFTP2 interoperability tests with other vendors on behalf of Odette.
