

SCX Security Certificate eXchange

Odette Sweden TC –day 2008-06-17

Bengt Andersson Scania InfoMate

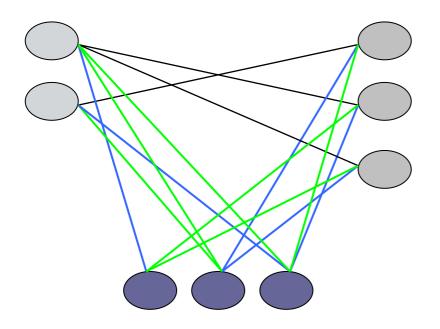

Produce proper specifications and solutions for Security Certificate handling to assure secure data exchanges with business partners, using OFTP2 and other B2B tools

OEM/Buyer 100 - 200

Suppl/Seller 4000 – 8000

Cert.Auth (CA) 300 - 600

Verify the CA, get own cert, pay, get revocation information

Verify the CA, get CA cert, get revocation information

- Processes, interfaces and protocols regarding trust control, exchange and verification for certificates
- Accepted minimum security level (s) (using definitions of S2R)
 and requirements for a certificate service provider

Specification conditions

- The solution has to be open, meaning not based on predefined vendors. Any certificate provider fulfilling the specification, can be accepted
- Usage of processes is cheap and easy, also for small users
- All necessary processes, interfaces and protocols are standardized
- The specification is widely applicable and has the potential to be used world-wide (not only EU)
- A user can select any accepted certificate service provider independent of the partner's service provider
- The general specification is independent of the PKI-application

- A Odette Trust Service defines minimum requirements for CA's and certificates
- If approved, certificates will be entered in a Trusted Signed List, stored at an Odette web site
- SW providers can download and verify the list.
- CA certificates can be downloaded from an Odette web site.
- Revocation list can be downloaded from an Odette web site.
