Company presentation

Encode Networks AB is a leading international provider of EDI and logistics solutions.

Company was founded in 1999 and today we have offices in Stockholm, Gothenburg and Falkenberg. Together with our partners we have an even greater geographical coverage.

We supply both competence and products/services for EDI and logistic processes as both integrated and stand alone solutions. We have historical focus in the Automotive and manufacturing industry but do also work in segments as retail, transport and food & beverage.

With a high level of experience in the Automotive industry and active participation within Odette we can deliver solutions in the front end of development.

We support our customers in construction and maintenance of a leading position in a supply chain through experience and development that has its origin in 1986 and a well documented track record since then.
