Company presentation

iCore Solutions AB is a knowledge and software development company that develop, market and implement solutions based on the business integration platform iCore Integration Suite. iCore Integration Suite makes integration between enterprises and applications considerably easier. We deliver economically attractive solutions that make integration flows faster as well as more effective and easier to control. With iCore Integration Suite, the information flow between enterprises and applications becomes considerably easier.

iCore Integration Suite is developed by a team who have "done it before". Flexibility, traceability, security, scalability, quality and high performance have always been important watchwords for us.

iCore Integration Suite usually attracts the demanding buyer, who knows where integration problems may occur and who appreciates an effective and economical solutions. We have a flexible organisation with cutting-edge knowledge of integration and electronic cooperation. By developing more and more packaged solutions in the form of small building blocks, short cuts and best practices, we constantly make it simpler for our end-customers to implement integration projects.

Example of projects that iCore Integration Suite may simplify and render more effective:

- B2B/EDI solutions towards customers, suppliers and other business partners. Our solution is based on the demands of the business system (which will continue being "master"), from which we create automated, complete integration solutions.
- Integration between Web applications and back-end systems or between different in-house applications. Integrated systems may send data between one another in real time or in batches. The risk of missed or doubled information, or other errors, is almost completely reduced. All our Web-based integration solutions have high security.

We always offer the initial project as a proof-of-concept, so that customers may test our solution in their own environment with the right to make an exit within three months. This makes the decision "smaller" and easier to take.

As a specialist within automated, intelligent business integration, we reach the market through our own organisation and a widespread partner network. In our partner network, you find a large number of companies with iCore trained consultants who work daily with our platform at various end-customers'. A number of large and mid-sized end-customers highly appreciate the simplicity of working with our products and have built up their own iCore competence to be able to control business integration development to a 100%.

Sample of end customers using iCore Integration Suite

Assa Abloy, Cardo, Crawford, Däckia, Eberspächer, Ecophon, Eldon, Emil Lundgren, ESAB, Fergas, Hirtentberger Automotive Safety, Hoya, Hultafors Group, Innovative Logistics, Johnson Controls, Konga Mekaniska, Levi Petersson Industri, Mont Blanc, Munksjö, OEM, Scandinavian Business Seating, SiteTel, Toyota Material Handling Europe.
